Re: Utility Scale Wind System in Sedgwick County

I, Rodney Green and my wife Pamela Green have already expressed our vehement opposition to the wind farm in Sedgwick County. Lorraine Green now adds her signature to this opposition.

This forest of wind towers will ruin our skyline and cause untold damage to the roads and infrastructure of Sedgwick County well into the future.

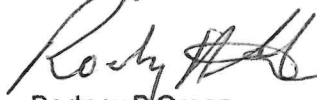

National Renewable Solutions (A Minnesota Company) cares nothing about the residents of Sedgwick County. They obviously picked our county as an easy sell due to our difficult economic conditions. The commissioners agreed to the project as an easy out from those financial difficulties. What has not been considered is the horrific damage the construction and maintenance of these huge monstrosities will cause to our county roads and other infrastructure.

Allowing 310 of these in our small county will look like a forest and not in a good way. There are much better ways to solve our economic concerns and leave a good place to live and work for our children and grandchildren. When you add the fact that close to 100% of the energy will go the front range, what good is it for us? The addition to our county coffers of construction permit fees will very soon be more than dispensed repairing infrastructure damage.

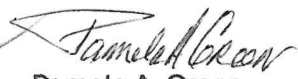

At the very least, this project should be 1) cut in half and 2) available technology should be demanded which will shut off the flashing red lights when no aircraft are in the area.

The best solution is to stop the project and spend our resources looking for less destructive ways of improving our county finances.

Sincerely,

Rodney R Green

Pamela A. Green
